

Instawards Statement of Work (SOW)
30-Day Scoped Engagement

1. Project & Team Information

Project Name:	Evergreen: a Soroban State-Archival Autopilot
Builder / Team Name:	Apex
Primary Contact (Name + Email):	Fatih Maulana - fatihmaulanamail@gmail.com
Ambassador Chapter:	Indonesia
Ambassador Chapter Lead:	Kenny Rivaldi
Date Submitted:	31-07-2026
Suggested Sprint Start Date:	17-08-2026

2. Instawards Overview & Intent

2.1 Instawards Purpose (for Builder Context)

Instawards are designed to support short, clearly scoped, execution-focused work that helps a project make tangible progress toward building on Stellar. Instawards are meant to fund specific, achievable outcomes that can be completed and demonstrated within 30 days or less.

This SOW represents a shared commitment between the Builder and the Ambassador Chapter Lead on what will be delivered, why it matters, and how success will be verified.

3. Problem Statement & Objective

Problem Being Addressed	What specific problem, gap, or blocker is this Instaward intended to solve?	Soroban smart contracts rely on ledger entries with a Time-To-Live (TTL), requiring developers to extend them before expiration to prevent state archival. If overlooked, contracts become unavailable until their state is restored, leading to unexpected downtime. Unlike other blockchain ecosystems, Stellar does not yet provide a dedicated tool to automate TTL management. Developers still need to monitor and extend TTL manually, creating unnecessary operational overhead and increasing the risk of production failures.
Objective of This Instaward	In one or two sentences, what will be	This project will deliver an open-source toolkit for automated Soroban TTL management,

Instawards Statement of Work (SOW)

30-Day Scoped Engagement

	true at the end of 30 days if this Instaward is successful?	consisting of a CLI, a non-custodial auto-bump engine, and a lightweight dashboard. The toolkit helps developers monitor contract health, prevent state archival, and optimize storage costs with minimal manual effort.
Example prompts for builders: What is currently preventing progress? What is unclear, missing, or unbuilt today? Why is this problem worth solving now?		

4. Scope of Work (30-Day Deliverables)

Important guidance: This scope must be achievable within **30 calendar days**. If the work feels larger, it should be reduced or split into more achievable phases.

4.1 In-Scope Deliverables

Deliverable	Description (What will be built or produced?)	Why this matters
Deliverable 1: Core CLI (evergreen)	A TypeScript-based npm package and CLI for scanning a contract's ledger entries through Soroban RPC. It reports remaining TTL, estimates archive timing and rent cost, and highlights potential storage inefficiencies. The package includes JSON and human-readable output, unit tests, and a quickstart README.	Developers can quickly check a contract's TTL health and estimate future storage costs from a single command, replacing repetitive manual checks.
Deliverable 2: Auto-Bump Engine (non-custodial, testnet)	A monitoring service that watches contract TTLs and automatically submits <i>extendTTL</i> before they expire. It uses a capped policy-signer, applies configurable threshold rules, and supports webhook or email alerts. The workflow is fully validated on Stellar testnet.	Automating TTL extensions reduces manual maintenance while keeping the solution non-custodial and aligned with Stellar's native smart account capabilities.
Deliverable 3: Dashboard + CI Check + Docs / Demo	A lightweight dashboard displaying contract status, bump history, and estimated storage costs. The deliverable also includes the <i>evergreen-check</i> GitHub Action, complete documentation, a 3–5 minute demo video, and published npm packages.	It completes the workflow by combining monitoring, automation, and developer tooling into a single experience that is easy to adopt and verify.

Instawards Statement of Work (SOW)
30-Day Scoped Engagement

Out-of-Scope (Explicitly Not Included) List anything that might be assumed but is not included in this Instaward scope.		
	This does not include production mainnet auto-bump, real billing, hosted billing or rent management, enterprise APM, multi-sig custody, support for non-Soroban chains, or formal verification/audit tooling. These are planned for a later phase.	

4.2 Deliverable-Aligned Budget Request

Requested Budget Amount	Rationale for Budget Request
\$4,800 (6 hours/day x 30 days x \$30/hour)	This budget covers the builder's time and the resources needed to complete the scoped deliverables within the 30 day period, from research and implementation to testing, documentation, and public release.

5. 30-Day Execution Plan & Timeline

5.1 Weekly Breakdown

Week	Planned Work	Expected Output
Week 1	Set up the TypeScript monorepo with Jest and ESLint. Research Soroban state archival, including TTL, rent, restore flow, storage types, <i>extendTTL</i> and RPC APIs. Build the initial scan command and cost model.	Working monorepo with an initial scan command running on testnet, including TTL analysis, archive prediction, cost estimation, and the first technical specification draft.
Week 2	Implement manual <i>extendTTL</i> , improve the prediction model, build the storage optimizer, and add unit tests.	Successful TTL extension on testnet with transaction hashes as proof, accurate predictions, and optimizer recommendations for storage improvements.
Week 3	Develop the auto-bump service with a capped policy-signer, configure threshold rules and alerts, and perform end-to-end testing on testnet.	Fully functional auto-bump workflow that prevents state archival on testnet, complete with transaction proofs, alert notifications, and validated non-custodial authorization.

Instawards Statement of Work (SOW)
30-Day Scoped Engagement

Week 4	Build the dashboard, publish the <i>evergreen-check</i> GitHub Action, finalize documentation, record the demo video, and publish the npm packages.	Live dashboard on testnet, published GitHub Action and npm packages, complete documentation, demo video, and a project ready for review.
--------	---	--

6. Evidence of Completion (Required)

Important guidance: Evidence should be clear, verifiable, and easy to review by the Ambassador Chapter Lead **with minimal technical expertise**.

6.1 Planned Evidence to Be Submitted

Deliverable	Evidence Type (link, repo, demo, screenshot, doc, tx hash, etc.)	Description
Deliverable 1	GitHub repository, npm package, CLI screenshots, and test coverage report	Public repository, published npm package, sample scan output showing TTL, archive prediction, and cost estimates, along with unit test coverage.
Deliverable 2	Testnet transaction hashes, engine logs, alert screenshots, and setup documentation	Proof of successful <i>extendTTL</i> transactions on Stellar testnet, auto-bump execution logs, alert notifications, and policy-signer configuration guide.
Deliverable 3	Dashboard URL, GitHub Action, demo video, documentation, and npm links	Live testnet dashboard, published <i>evergreen-check</i> GitHub Action, complete documentation, a 3–5 minute demo, and links to the published npm packages.

6.2 Evidence Verification Checklist (For Ambassador Use)

For each deliverable, the Ambassador Chapter Lead will assess whether evidence is present and sufficient.

30-Day Scoped Engagement

Deliverable	Evidence Present	Evidence Partial	Evidence Missing	Comments
Deliverable 1	☐	☐	☐	
Deliverable 2	☐	☐	☐	
Deliverable 3	☐	☐	☐	

7. Next-Step Alignment

7.1 Anticipated Next Step After Completion

After this Instaward, the most likely next step is:

- ☐ Apply to SCF Build Award
- ☒ ~~Continue development independently~~
- ☒ ~~Apply for a follow-on Instaward (if eligible)~~
- ☐ Seek other ecosystem support
- ☐ Other:

8. Instawards Constraints Acknowledgement

By submitting this SOW, the Builder acknowledges:

- ☒ ~~This scope will be completed within 30 days or less.~~
- ☒ ~~Instawards support execution, not open-ended exploration.~~
- ☒ ~~A project may receive no more than two follow-on Instawards.~~
- ☒ ~~Each Instaward is capped at \$5,000.~~
- ☒ ~~Total Instawards funding may not exceed \$15,000.~~

9. Submission Confirmation

Once finalized, this Statement of Work will be submitted by the Ambassador Chapter Lead via the Instawards Airtable submission form for review and approval.
