Evergreen

The four kinds of entry

Three are recoverable. One is not.

instance	code	persistent	temporary
The contract's own state pointer. `archived`	The compiled Wasm. Every contract built from it shares this one entry. `archived`	Durable stored values. `archived`	Disposable stored values. Gone permanently, with no restore. `deleted`

Read from the network's own configuration: a temporary entry's minimum is 720 ledgers, about an hour.
