Evergreen

The shared code entry

One entry. Every contract built from that Wasm. They fail together.

of the rent

98%

is that one shared code entry — 8,116,648 of 8,264,289 stroops, across all four of guinea-pig A's entries. Scanning only its instance and code, the same entry is 99%: identical rent, different denominator. The scope travels with the number.
